

As a selected contractor for the Alliant SB GWAC, **Alliant Information Technologies, LLC** is a diversified Information Technology company whose mission is to bring innovative solutions to the federal government and to become a partner in the process to make agencies more efficient and effective in this increasingly complex world.

The **Alliant SB Government-wide Acquisition Contract (Alliant SB GWAC)** provides innovative Information Technology (IT) solutions from small businesses. Alliant SB offers advantages to pre-qualified small businesses by providing opportunities to compete amongst a defined group of contract holders and a chance to develop their business before moving into unrestricted acquisition environments. The Alliant SB GWAC is designed to assist agencies in reaching their small business procurement goals.

Alliant Information Technologies, LLC brings a new vitality to the information technology federal marketplace with a best of breed approach to technology management. Instead of simply continuing yesterday's processes and procedures, we bring a whole new perspective based on optimization of assets and performance management.

Our philosophy is based on measuring the existing performance parameters and designing new, fresh, state-of-the-art processes that are specifically implemented to create improved work flow and output performance. The criteria and measurement parameters are chosen based on the client's business process requirements.

Every assignment is an opportunity to improve the efficiency and effectiveness of the entire system, not just the individual processes or stand alone networks. This holistic approach allows a broader range of options than the traditional narrow focus of most IT providers. We pride ourselves on our ability to offer a far wider range of options to our clients and with this a deeper and more innovative understanding of the possible solutions.

Our service offering includes the following:

- Program Management
- Portfolio Management
- Business Processes
- Enterprise Architecture
- Systems Engineering
- Software Engineering
- Data Systems
- Logistics
- Acquisition Management
- Test and Evaluation
- Independent Verification & Validation
- Financial Management
- Information Assurance
